

### THE CHALLENGES TO 2015

In 2014 many events led to complex situations and that actually makes the intervention with investigative, support of science and technology. For examples: Ebola, dengue, chikungunya fever, lack of water and many environmental weather, deforestation, migratory issues, elections, scandals involving politicians and many other occurrences.

As in every beginning of year 2015 may be a promise of resumption, to review, rethink and the creation of new research proposals, of science, of technology, and the possibility to reconcile the rigidity of knowledge "hard" with the "humanization" of practice in health, social and collective intervention.

In this sense the REFACS reaching its third year of existence and second year with their publications trilingual makes room for thematic publications of large areas of knowledge, as well as multidisciplinary, cross-cutting issues.

There are many challenges to be overcome on issues which research can give their contributions. Some of it is the space for the dissemination of its production and the other the dialogue with social areas of interest and they can achieve in their results using the benefit, the more possible collective. The REFACS come seeking this, expanding your range of interest in addition to the health sector publications; other important areas of knowledge such as education, environment, history, geography and urban issues, psychoanalysis, neglected diseases, vulnerable groups, social and health policy, among many other themes that permeate the dynamics of families, life cycles and in the health, while important social area.

We appreciate the important contribution of our internal and external collaborators of UFTM, without which this journal could not evolve and especially to our columnists who discloses his productions and our readers that can make use of the results presented. A big hug to all and all, we look forward not only to visit and reading of published articles, as well as national and international contributions in 2015.

Good Read!
